NEWS RELEASE

KEX2007-14

Rosebud AZ, Drill Reclamation Bond Posted

Kent Exploration Inc (“the Company”) reports that the drill program reclamation bond has been posted with the Kingman, AZ office of the United States Bureau of Land Management.

The drill program will consist of up to 1,500 metres of diamond drilling to test the eight known veins on the property to depth. Surface sampling on these veins, conducted in 1996 by Reliance Geological Services, determined they are highly prospective for gold and silver mineralization.

A number of samples were taken from the east end of the 100 level of the Southwick north vein during a limited sampling program in late 2005 and reported in the Company’s news release KEX2005-5, which can be viewed on the Company’s website at <http://www.kent-exploration.com/news/2005/Kent2005-5.pdf>

Underground Sampling Program Progress

Remedial work has been completed at the shaft collar, and ladder access to the 100 level of the Southwick veins has been completed, providing access to sample the approximately 300 meters of historic workings at the 100 level.

The Company plans to install submersible pumps to remove the water that has accumulated in the lower workings from storm runoff to provide access to sample the approximately 500 metres of historic workings at the 200 and 250 levels.

Kent Exploration Inc is a junior exploration company that has earned a 50% interest in the Ivanhoe Creek property, a Midas-style target in Nevada’s Carlin Trend, has a 100% interest in a mining lease option on a gold/silver/barite prospect in eastern Washington state, and is earning a 100% interest in the Rosebud property, a gold/silver prospect in northern Arizona.

This News Release has been prepared on behalf of the Kent Exploration Inc Board of Directors, which accepts full responsibility for its contents.
